

EVOLVE GENOMIX & diaago

Partner Feature

Evolve is making genomic testing more accessible across agriculture, food safety, and public health. diaago supports their growth with reliable lab supplies and fast, responsive service. Together, they're building a more efficient path from testing to impact.

July 29th, 2025

PRESS RELEASE

Evolve Genomix is redefining how advanced genomics can be applied across multiple sectors, from research to agriculture, environmental health, and food safety. Their team brings together scientists and subject matter experts with deep expertise in next-generation sequencing, molecular diagnostics, food microbiology, plant pathology, crop sciences, bioinformatics, and laboratory practice. This cross-disciplinary strength allows Evolve to support a wide range of customers and research partners.

At its core, Evolve's mission is to make high-quality genomic tools more accessible and impactful, whether the goal is advancing sustainable agriculture, enhancing food system safety, protecting environmental biodiversity, or improving public health outcomes. In addition to their centralized lab-based testing services, Evolve is also focused on developing point-of-use rapid diagnostic test kits for plant and human pathogens, enabling faster turnaround times. Recently, the company was selected by the **National Science Foundation (NSF)** for funding through its highly competitive and prestigious **SBIR program** to support this product development. By pursuing both centralized and field-ready testing strategies, Evolve aims to differentiate itself from competitors and better serve customers' diverse testing needs.

To help support this growth across diverse applications, Evolve partners with **diaago** for a wide range of lab essentials, including pipette tips, PCR plates, reservoirs, sealing films, and benchtop lab equipment. In addition to supplying high-quality consumables, diaago provides flexible, responsive service tailored to high-throughput labs. In urgent situations, diaago delivers by providing same-day access to critical items and keeping Evolve's testing operations on track. The relationship is built on more than just supply; it is grounded in fast turnaround, dependable stock, and a clear understanding of the day-to-day demands modern labs face.

As Evolve continues to grow its capabilities and expand access to genomic testing, having trusted, responsive **partners** helps them stay agile, scale effectively, and keep delivering high-impact results across sectors.
